

Fibonacci Trader Workshop

July 19-25, 07 Las Vegas

Chris Lori, CTA

The following is an overview of the trading aspects I will cover in my presentations during the workshop. As a member of Fibonacci Trader, you have a great start on trading!

If you would like some background on me, you can visit my old website at www.seaviewfx.com this site will be taken down in the near future.

We are currently working on a new website that will be released before the Fibonacci Trader, Las Vegas workshop. The website will contain some of the features listed below.

- Your Own Trade Space – a place to record, manage and store trade screenshots and notes
- Risk Management facility like the professionals
- Streaming Video Live Market Reviews and chat
- Training Video's on File
- Trade Watch – Daily levels to watch for trades in advance

And more...

If you are interested in being informed of the launch of the site, please send an email to seaviewfx@gmail.com and put "All Star" in the subject line.

I look forward to working with you in Las Vegas with Fibonacci Trader!

The Institutional Environment

This section will introduce the trader to the banking environment, bank reports, technical analysis that banks use and how you can be in touch with what the banks are considering each trading day and week. We will also direct you to helpful resources for your daily trading routine.

Candlesticks Useful in Forex Trading

We will cover the few candlestick formations useful in foreign exchange trading. Although candlesticks are viewer friendly when looking at charts, we don't want to get caught up in many ineffective candlestick formations that expose you to risk. There are a limited number of formations that are helpful in foreign exchange trading patterns.

Pattern Recognition using Fibonacci Ratios, Pivots and Oscillators

Fibonacci levels and price patterns can offer, in advance, specific price entry points to stalk a trade. We will cover details of how to stalk high probability trades weekly and intraday applying pattern recognition with Fibonacci levels and time of day analysis.

We will also cover pivot points and oscillators and how they are used in combination with Fibonacci levels to take and manage trades.

Entry Techniques and Position Management

One of the greatest combined technical and psychological challenges for traders is deciding when to press the button. I will show you my specific methods to enter the market and how I specifically manage trades in a range of market conditions.

Risk Management

Of course!

Psychology of Trading

We will discuss at least five key challenges developing traders must come to terms with to give themselves the opportunity to succeed.

Simulated Trading Exercises and Hopefully some Live Recorded or Live Trading

We will do some live market analysis and live trading, although the hours of the workshop are not at ideal times for fx volatility. Failing desirable volatility, we can review some live recorded trades or discuss other key factors, as well as work through some simulated trades on site.

I look forward to seeing you all. Good luck with your trading and be careful out there!

Chris Lori
